

Latest Update: Australian Open 2010

Nota: Los jugadores atp usan monofilamnetos de poliesters de alta tenacidad fabricados en belgica,alemania,austria o francia y algunos los mexclan con tripa natural fabricada en francia o nueva zelanda para aumentar la potencia. El uso de mayor tension en las cross(cuerdas horizontales) obedece a la necesidad de evitar que las cuerdas se rueden , esto se logra incrementando la tension entre un 5-10% de las cuerdas cruzadas,sobre todo si el encrodado es hibrido, de poly con tripa natural, que es el unico hibrido que usan en la atp y wta.

Un pequeno grupo de jugadores atp(unos 4) usan multifilamentos de poliamidas, francesas o austriacas , pero estas cuerdas que son de maxima potencia , solo sirven para aquellos tenistas que golpeen plano , debido a que la baja rigides del material no genera efectos.
